I am writing to apply for the Senior IT Administrator position at think about IT GmbH. Your focus on optimizing internal processes and delivering excellent IT service through modern technology aligns with my own approach to system administration and infrastructure management.

Through my professional experience, I have developed strong skills in Linux system administration, including configuring and maintaining Nginx and Apache web servers, managing Docker containers for application deployment, and setting up CI/CD pipelines for automated workflows. I have hands-on experience monitoring system performance, performing regular backups, and implementing security measures to protect IT infrastructure.

One area that particularly interests me is the administration and maintenance of internal IT systems and networks. In my previous work, I have been responsible for installing, configuring, and updating software, as well as documenting IT processes and supporting team members with technical issues. I approach system administration with a focus on reliability, security, and clear documentation.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how my experience can contribute to the thinkGROUP team.

Best regards, Md Shahanur Islam Shagor

Sincerely,

Md Shahanur Islam Shagor
