I am writing to apply for the Operations & Process Optimization Manager role at REVOIC GmbH. Your description of a growing agency facing increasing operational complexity resonates with me. I am drawn to the challenge of building better, digital, and AI-supported systems that allow good work to scale without adding friction.

What stands out to me about this role is the emphasis on critical thinking over administrative work. You are not looking for someone to manage tasks, but someone to analyze structures, identify blockers, and build real solutions. That is exactly the kind of work I enjoy. Through hands-on project development, I have built AI-powered assistants, automated workflows, and real-time monitoring systems that reduced manual effort and improved team coordination. I approach problems systematically: I ask why things are done a certain way, where redundancy exists, and how processes can be standardized or automated.

One area where I have direct experience is building AI-driven tools for operational efficiency. I have developed systems that use AI for meeting notes, status updates, QA checklists, and documentation. I have also designed and implemented automation workflows that digitize internal processes, making them faster and more reliable. This matches your need for someone who can translate recurring operational problems into clear workflow logic with triggers, inputs, outputs, and escalation paths.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review. I would welcome the opportunity to discuss how my background in process optimization and AI-driven automation can contribute to REVOIC’s continued growth.

Sincerely,

Md Shahanur Islam Shagor
