I am writing to apply for the AI Filmmaker role at Foxelli Group. Your approach to building a tribe of curious builders who automate repetitive work and create meaningful content aligns with how I like to work. The idea of producing daily micro-dramas using cutting-edge AI tools is exactly the kind of creative-technical challenge I want to be part of.

Through my work as a Full-Stack and AI Engineer, I have spent over a year applying AI to real-world systems. I have worked extensively with OpenAI APIs, Replicate for image generation, and built AI assistants trained on custom datasets. These experiences have given me practical prompt engineering skills and a solid understanding of how to generate, evaluate, and iterate on AI-produced content. I am comfortable moving fast, experimenting with new tools, and maintaining quality under daily publishing deadlines.

One area that particularly interests me is the full cycle of AI video creation from generating scenes to final export. In previous projects, I have integrated AI models for image processing and voice-to-text conversion, and I understand the importance of maintaining consistency across outputs. I am confident I can apply this experience to generate scenes, maintain character consistency, sync audio, and optimize vertical videos for TikTok, Instagram Reels, and YouTube Shorts.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to complete the text task to demonstrate how I approach AI-driven content creation.

Best regards, Md Shahanur Islam Shagor

Sincerely,

Md Shahanur Islam Shagor
Full-Stack Developer & AI Engineer
