I am writing to apply for the Competency Assessor Operations role at NextDecade. The position caught my attention because it sits at the intersection of operational rigor and technical systems, an area where I have built solid experience through hands-on software development and infrastructure management.

My professional background includes designing and deploying full-stack web applications using Laravel, Next.js, and Node.js, with a strong emphasis on reliability and performance. I have worked extensively with Linux servers, Docker, Nginx, and CI/CD pipelines to ensure applications run smoothly in production environments. This operational focus has given me a practical understanding of what it takes to maintain consistent system performance and respond effectively to issues as they arise.

In previous work, I built and maintained RESTful APIs, implemented role-based access control, and integrated real-time features using WebSockets. I also optimized database queries and caching strategies to improve application responsiveness. These experiences have taught me to think systematically about operations, from deployment to monitoring to troubleshooting.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how my operational and technical background aligns with the needs of your team.

Sincerely,

Md Shahanur Islam Shagor
