I am writing to apply for the Communication Manager â Brand, Content & Technology role at Ing Plus AG. Your work in intelligent process automation for infrastructure management and data-driven solutions for network operators is genuinely interesting. Translating complex technologies into clear, actionable communication is a challenge I have faced directly in my own work.

As a full-stack and AI engineer, I have spent years building software systems and then explaining how they work to stakeholders, clients, and team members who do not share my technical background. Whether it was describing the architecture of an AI-powered financial app or breaking down the real-time data flow in a server monitoring dashboard, I have learned to turn technical complexity into understandable language without losing accuracy.

One area that particularly interests me is the role's focus on technology translation and content creation for software solutions. In my experience developing full-stack applications with Laravel, Next.js, and React, I have written technical documentation, product descriptions, and user-facing content that made complex features accessible. I have also worked with Figma for UI design and collaborated closely with design teams to ensure that visual and verbal communication align precisely.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I would welcome the opportunity to discuss how my background in technology and communication can support Ing Plus AG's brand and content strategy. I have attached my CV for your review.

Sincerely,

Md Shahanur Islam Shagor
Full-Stack Developer & AI Engineer
