I am writing to apply for the Senior Embedded QA Engineer position at SumUp. Your work on building beautifully designed card payment devices that help small merchants succeed is something I find genuinely interesting. The opportunity to contribute to hardware test infrastructure and mobile testing tools in a cross-functional team aligns well with my engineering background.

Through my professional experience, I have developed strong expertise in Linux environments and Python programming. I have built and maintained test infrastructure, implemented CI/CD pipelines, and worked extensively with REST APIs. My approach to testing includes both automated strategies and manual test case management, ensuring comprehensive coverage across system components.

One area that particularly interests me is building test libraries and designing HIL test infrastructure. In previous projects, I have worked on real-time monitoring systems and communication engines where reliability and thorough testing were critical. I am comfortable taking ownership of testing workflows, from writing test cases to ensuring new releases meet quality standards before deployment.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how my background in embedded QA, Linux, and Python can contribute to SumUp’s Hardware Tribe.

Sincerely,

Md Shahanur Islam Shagor
