I am writing to apply for the SAP Berechtigungsberater position at Recruit 121 Group. While my professional background is in software engineering rather than SAP administration, I bring strong analytical skills and hands-on experience designing secure, role-based access systems that translate well into the SAP authorization domain.

Through my work as a full-stack developer, I have built and maintained authentication systems, role-based access control (RBAC) frameworks, and secure permission structures in production environments. I have experience implementing granular user permissions, analyzing access requirements, and ensuring compliance with security best practices. This foundation in access management and system security aligns with the core responsibilities of this role.

One area that particularly interests me is the challenge of designing authorization concepts for complex enterprise systems. In my previous work, I developed multi-role platforms where different user types required distinct access levels, and I learned to balance security with usability. I am confident I can apply this analytical approach to SAP R/3, S/4HANA, and Fiori authorization environments.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and welcome the opportunity to discuss how my background in secure system design and access management can contribute to your team.

Sincerely,

Md Shahanur Islam Shagor
