I am writing to apply for the Network & IT Security Engineer position at Specific-Group Germany GmbH. Your focus on planning, implementing, and operating secure network and security solutions for mid-sized clients aligns directly with my technical background and interests.

Through research and development work in cybersecurity and secure communications, I have designed and implemented encryption-based communication protocols (AES, secure key exchange) for distributed systems. This work involved developing concepts for VPN-like secure tunnels, access control mechanisms, and data integrity verification in environments where reliability and resilience are critical. I am comfortable working with Linux server environments, Docker containers, and Nginx for secure deployment and network configuration.

One area that particularly interests me is the administration and migration of firewall systems and the implementation of VPN, routing, and access-control concepts. In my project work on secure UAV communication frameworks, I built systems that required careful network segmentation, secure key distribution, and real-time authentication to prevent unauthorized access. These experiences have given me a practical understanding of how security concepts apply to real-world network infrastructure.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I am confident that my structured, solution-oriented approach and my experience with secure systems would allow me to contribute meaningfully to your team. I have attached my CV for your review and would welcome the opportunity to discuss how I can support your clients' network and security projects.

Sincerely,

Md Shahanur Islam Shagor
