I am writing to apply for the Senior Data Scientist - Demand Forecasting position at VOIDS Technology GmbH. Your mission to build an AI brain that helps mid-size Shopify brands achieve 98% inventory efficiency and unlock six-figure cash flow is exactly the kind of real-world AI problem I find genuinely interesting. The opportunity to own the forecasting engine that processes over 1 billion data points and directly influences customer outcomes aligns well with my technical background and engineering approach.

Through research and development work, I have built AI-powered systems that process data, generate insights, and automate decisions in production environments. My experience includes working with Python for data processing and model integration, PostgreSQL for structured data storage, and AWS for deploying scalable infrastructure. I have hands-on experience building pipelines that connect data ingestion, model inference, and real-time output delivery to end users.

One area that particularly interests me is building AI workflows where the system itself handles decision-making and configuration. In previous projects, I have integrated AI assistants that process user input, interact with external APIs, and automate complex multi-step workflows. This experience maps directly to your goal of shipping AI-enabled data pipelines that can pick the right setup for a customer with minimal human intervention.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how my approach to building AI-driven systems can contribute to VOIDS' next phase of growth.

Sincerely,

Md Shahanur Islam Shagor
