I am applying for the Engineering Manager Heartbeat AI position at 1KOMMA5°. Your mission to build the energy system of the future with an intelligent, integrated virtual power plant is exactly the kind of real-world challenge I want to contribute to. The combination of software engineering, AI-assisted development, and scalable infrastructure aligns closely with my background.

Through my professional experience as a full-stack developer, I have worked extensively with TypeScript, Next.js, and Node.js, building production applications that handle authentication, real-time data, and third-party integrations. I have also used Flutter for mobile development and have deployed applications on cloud platforms including Google Cloud and AWS. These technologies overlap directly with your stack.

One area that particularly interests me is the emphasis on experiment-driven innovation and reducing technical debt. In my previous work, I have consistently focused on writing clean, maintainable code, automating repetitive tasks, and documenting decisions to improve team velocity and developer satisfaction. I have also contributed to hiring processes and mentored junior engineers, which has given me practical experience in supporting team growth.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how I can contribute to 1KOMMA5°s mission of accelerating the energy transition.

Best regards, Md Shahanur Islam Shagor

Sincerely,

Md Shahanur Islam Shagor
Full-Stack Developer & AI Engineer
