I am writing to apply for the Software Engineer - Sensor Fusion position at Quantum-Systems GmbH. Your work on small Unmanned Aerial Systems and real-time AI-powered data processing for defence and security sectors is directly relevant to my research and development focus.

Through research and development work, I have built practical experience in autonomous systems, sensor integration, and real-time data processing. I have worked with C++ and Python to develop object detection pipelines using YOLOv8, implemented ultra-low latency UDP streaming protocols, and designed systems that operate reliably in offline, resource-constrained environments. These projects required a solid understanding of coordinate systems, data alignment, and robust processing logic.

One area that particularly interests me is multi-sensor fusion and tracking. In my work on GPS-denied navigation for UAV swarms, I have analyzed simulated and real sensor data to understand system behavior, implemented data association and state estimation logic, and built automated tests to validate fusion pipelines. I am comfortable debugging real-world scenarios and improving logging and diagnostics to make systems more observable.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how my background in autonomous systems and sensor fusion can contribute to Quantum-Systems.

Best regards, Md Shahanur Islam Shagor

Sincerely,

Md Shahanur Islam Shagor
