I am writing to apply for the Senior Marketing Manager position at Complori. The merger of cleverly and codary to create a leading EdTech provider for children in the DACH region is an exciting development, and I am interested in contributing to the growth of your marketing function.

My background is in software engineering, with a strong focus on full-stack development and data-driven systems. I have practical experience with SQL, which aligns with your need for data-driven campaign analysis and reporting. I am comfortable working with analytics tools and building systems that track performance metrics, which directly supports the end-to-end performance marketing and attribution responsibilities outlined in the role.

In my professional experience as a Web Developer, I built and integrated RESTful APIs, implemented authentication and role-based access control, and optimized application performance. This technical foundation allows me to understand and contribute to the marketing tech stack, including server-side tracking, conversion APIs, and marketing automation workflows. I am accustomed to working with data, running analyses, and making decisions based on measurable outcomes.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how my technical and analytical skills can support Complori’s marketing goals.

Sincerely,

Md Shahanur Islam Shagor
