I am writing to apply for the Founding Marketing / Brand role at acemate.ai. Your mission to build the AI infrastructure for education and transform static content into interactive learning experiences is exactly the kind of product-driven challenge I want to contribute to.

Although my primary expertise is in software engineering, I have consistently taken ownership of the full product lifecycle, including the brand-facing elements. For every web application I have built, I was responsible for the landing page, user interface design, content creation, and ensuring a consistent visual identity across all touchpoints. This has given me a practical, hands-on understanding of how technical products are positioned and communicated to different audiences.

What stands out to me about this role is the need to operate at the intersection of D2C and B2B, balancing a relatable brand for students with a credible infrastructure partner image for institutions. I am comfortable working across both contexts. I have experience producing content, managing social media presence, and using analytics to make data-informed decisions. I also work AI-native, constantly testing new tools to improve efficiency and output.

In addition to my technical and brand experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I am looking for a founding role where I can take ownership, build processes from scratch, and grow with the company. I am based in Berlin and ready to work on-site. I have attached my CV for your review and would welcome the opportunity to discuss how I can contribute to acemate’s next phase of growth.

Sincerely,

Md Shahanur Islam Shagor
