I am writing to apply for the (Senior) Campaign Manager position at Quantum-Systems GmbH. Your work in AI-powered unmanned systems and multi-domain operations is impressive, and I am drawn to the challenge of translating complex technology into compelling, multi-channel campaigns.

While my professional background is in software engineering, I have spent years building and managing digital platforms that rely on the same strategic thinking required for campaign management. I have developed full-stack applications using Laravel, Next.js, and React, deployed them on AWS, and maintained them with CI/CD pipelines. This experience gives me a practical understanding of the digital channels, automation tools, and data flows that underpin modern demand generation.

In my previous roles, I have led projects from concept to delivery, coordinating with stakeholders across sales, product, and engineering. I have managed timelines, budgets, and external integrations, always with a focus on measurable outcomes. I am comfortable with data analysis, performance tracking, and using insights to refine strategies.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review. I would welcome the opportunity to discuss how my background can contribute to Quantum-Systems' global campaign efforts.

Sincerely,

Md Shahanur Islam Shagor
