I am writing to apply for the (Senior) Manager Revenue position at Ruby GmbH. Your focus on Lean Luxury, data-driven revenue optimization, and creating spaces with personality resonates with how I approach my own workâ with precision, curiosity, and a focus on real results.

Although my professional background is in software engineering, I have consistently worked with data-intensive systems that require strong analytical thinking, structured planning, and a numbers-first mindset. I am comfortable working with statistical data, identifying trends, and making decisions based on quantitative analysis. These skills translate directly into revenue management, where understanding market trends, KPIs, and performance metrics is essential.

In my experience as a Web Developer, I built real-time monitoring dashboards and reporting tools that tracked system health, user behavior, and performance metrics. This required me to work with large datasets, generate forecasts, and present actionable insights to stakeholders. I also managed budgets for cloud infrastructure and optimized resource allocation to maximize efficiencyâ skills that align with managing revenue performance and yearly budgets.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how my analytical and organizational skills can contribute to Ruby’s revenue team. Thank you for your time and consideration.

Sincerely,

Md Shahanur Islam Shagor
