I am writing to apply for the App-Tester / Testanwender position at Winkler & Company. The opportunity to evaluate digital applications from a real user perspective and contribute to making apps, websites, and online services more intuitive and user-friendly aligns directly with how I approach software quality.

As a software engineer who builds and tests web and mobile applications regularly, I have developed a practical understanding of what makes an interface clear, logical, and easy to navigate. I notice when a registration flow is confusing, when a search function behaves unexpectedly, or when loading times affect the overall experience. I can evaluate these aspects systematically and provide honest, structured feedback.

I am comfortable testing across multiple devices including PC, laptop, tablet, and smartphone, and I have a reliable internet connection for remote participation. Whether the task involves completing typical user scenarios like product searches or checkout flows, or documenting impressions in an online questionnaire, I can follow instructions carefully and deliver thorough results.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review. I would welcome the chance to contribute to your usability projects and help improve digital products for real users.

Sincerely,

Md Shahanur Islam Shagor
