I am writing to apply for the (Senior) CRM Tech Manager position at MILES Mobility. Your mission to make user communication smarter, more automated, and deeply personalized at scale is exactly the kind of technical challenge I enjoy solving. The idea of moving from manual segment-building to fully automated, individually relevant communication using data, AI, and behavioral triggers is something I have been actively working toward in my own projects.

Through my professional experience as a full-stack developer, I have built systems that rely on SQL for data extraction, segmentation, and analysis. I am comfortable writing complex queries and optimizing database performance to support real-time decision-making. My technical stack includes HTML, CSS, and JavaScript, which directly supports the templating and frontend requirements of CRM platforms like Braze.

One area that particularly interests me is integrating AI tools into practical workflows. I have developed applications that use OpenAI and other AI services to automate processes, generate insights, and personalize user experiences. For example, I built an AI-powered financial application where I integrated OpenAI assistants, voice-to-text transcription, and automated document generation. This experience has given me a practical understanding of how AI can be applied to increase efficiency and relevance across communication touchpoints.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how my technical background and AI integration experience can contribute to MILES Mobility’s CRM infrastructure.

Sincerely,

Md Shahanur Islam Shagor
