I am writing to apply for the Entrepreneur in Residence role at VARM. Your mission to decarbonize Europe's buildings by scaling insulation solutions is urgent and ambitious. I want to contribute to that goal.

My background is in full-stack engineering and product building. Over the past four years, I have worked across web development, API design, and deployment, taking projects from concept to production. At Explo-IT, I owned the full delivery cycle for multiple applications, building scalable backends with Laravel, responsive frontends with Next.js, and integrating real-time features, payment systems, and role-based access control. I am used to working without hand-holding and making decisions with incomplete information.

What stands out to me about VARM is the combination of climate impact and early-stage intensity. You are scaling fast after a significant Series A, and the role requires someone who can build structure where none exists and deliver results quickly. That matches how I work. I have built systems from scratch, deployed them on Linux servers with Docker and Nginx, and maintained them under real usage conditions.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review. I would welcome the opportunity to discuss how I can contribute to VARM's growth and help insulate one million homes over the next decade.

Sincerely,

Md Shahanur Islam Shagor
