I am writing to apply for the Senior Data Scientist, Consumer Analytics role at Wolt. The opportunity to work with consumer-facing data at scale, drive actionable insights, and influence product decisions directly aligns with the kind of work I find most meaningful.

Wolt's mission to master user experience while scaling a platform across hundreds of cities is a compelling data challenge. The complexity of geolocational and temporal data, combined with real-time operational dynamics, makes this an environment where analytics can have a direct and measurable impact on both the product and the business.

Through my project work, I have built AI-powered systems that automate tasks and process data intelligently. For example, I developed an AI-powered financial application that used OpenAI models and AWS services to handle voice-to-text conversion, PDF generation, and automated email delivery. This required working with data flows, API integrations, and ensuring reliable system behavior. I also built a real-time object detection system using YOLOv8n and Python, processing video streams with low latency on edge hardware. These experiences have given me a practical understanding of how AI can accelerate workflows and generate meaningful outputs from raw data.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how my background in AI, data-driven development, and system building can contribute to Wolt's Consumer Analytics team.

Sincerely,

Md Shahanur Islam Shagor
