I am writing to apply for the Founding Engineer role at Junini GmbH. What you are building in the optics industry is genuinely interesting: a platform that digitizes a market that has remained largely offline, working directly with opticians to deliver real value. I want to help take that from POC to production.

My strongest fit is in backend and full-stack engineering. I have built and deployed production systems using Node.js, Express, Laravel, and React, with cloud infrastructure on AWS. I have implemented authentication flows, payment integrations via Stripe, and role-based access control in multi-tenant platforms. I am comfortable making architectural decisions and owning entire feature areas.

One area that aligns directly with this role is taking platforms from prototype to production readiness. In my professional experience, I have taken applications through the full cycle: designing APIs, optimizing database queries, integrating third-party services, and deploying on Linux servers with Docker and Nginx. I have also worked closely with stakeholders to iterate on features based on real customer feedback.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review. I would welcome the chance to discuss how I can contribute to Junini’s growth as a founding team member.

Sincerely,

Md Shahanur Islam Shagor
