I am writing to apply for the Werkstudierende Fintech Operations position at Credibur. Your work on building infrastructure for credit portfolio management between alternative lenders and institutional investors is a practical and growing area of fintech, and I am interested in contributing to your operations team.

Through my work as a full-stack developer, I have developed a high level of accuracy and a structured approach to handling data. I have experience building systems that process transactions, manage user data, and ensure data integrity. This background has trained me to work carefully with financial information, verify system suggestions, and document my work thoroughly.

I am comfortable working with web-based dashboards and tools, and I can quickly adapt to new software environments. In previous projects, I have worked on payment integration and data reconciliation features, which gives me a practical understanding of the importance of correctly matching transactions to accounts. I am also experienced in identifying recurring issues and communicating them clearly for process improvement.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I am currently enrolled in a Software Engineering program in Russia and am based in Berlin, available for the required in-office onboarding. I am eager to learn the specifics of private credit operations and contribute to your team’s work.

I have attached my CV for your review.

Sincerely,

Md Shahanur Islam Shagor
