I am writing to apply for the (Senior) GenAI Engineer position at Trusted Shops. Your vision of building Agentic Commerce and embedding AI as a core driver of product development aligns closely with the kind of engineering work I enjoy most. I have been following how Trusted Shops builds trust at scale across Europe, and I find the combination of AI, security, and user-centric design genuinely compelling.

Through research and development work, I have built production-ready AI systems that go beyond simple chatbots. I designed and deployed an AI-powered financial assistant using OpenAI models, AWS SES, and AWS Transcribe, handling voice-to-text conversion, PDF generation, and real-time data processing. This system required end-to-end ownership, from API design to cloud deployment, and involved integrating multiple AI services into a single reliable workflow.

One area that particularly interests me is building autonomous AI agents and scalable services. In my work on an AI-powered real estate platform, I trained multiple AI assistants using GPT models, integrated Replicate API for image processing, and implemented role-based authentication, subscription plans, and Stripe payment flows. I also built REST APIs and serverless functions on AWS, ensuring the system could handle concurrent users and maintain low latency.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how my background in AI engineering can contribute to the AI Solutions Team at Trusted Shops.

Sincerely,

Md Shahanur Islam Shagor
Full-Stack Developer & AI Engineer
