I am writing to apply for the Leiter Digitale Lˆ¶sungen position at RD Service. The opportunity to build and lead digital services in a company with a strong tradition of quality and innovation aligns well with my experience in software engineering and platform development.

My technical foundation covers modern software architectures, cloud technologies, and IoT-related systems. I have worked extensively with Laravel, Next.js, Node.js, and cloud platforms such as AWS and Google Cloud. I have also deployed containerized applications using Docker and managed server environments with Nginx and CI/CD pipelines. This combination allows me to understand both the strategic and technical layers of building digital products.

One area that particularly interests me is the development of data-driven platforms and real-time systems. In previous work, I built a real-time server health monitoring dashboard using React, Node.js, Socket.IO, and Docker, which streamed live metrics to the browser and provided instant visibility into system status. I have also developed scalable multi-vendor e-commerce ecosystems and AI-powered applications that required robust backend architecture, role-based access control, and third-party integrations.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review. Thank you for considering my application.

Sincerely,

Md Shahanur Islam Shagor
