I am writing to apply for the Business Development & Go-to-Market Lead, DACH position at ScoutRex. What stands out to me is the opportunity to join an early-stage talent-intelligence startup emerging from a university research environment and help shape how the DACH market is approached from the very first pilots.

Although my professional background is in software engineering, I have always operated with an entrepreneurial mindset. I have experience taking initiative in small teams, building products from scratch, and communicating effectively with both technical and non-technical stakeholders. I am comfortable representing a company externally and building relationships from the ground up.

One area that particularly interests me is the intersection of AI and HR-Tech. I have built AI-powered applications in the past and understand how intelligent systems can solve real-world problems. I am genuinely curious about how ScoutRex's prototype works and how it can bring fairness and intelligence to talent processes.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I am looking for a role where I can take real ownership and make a tangible impact from day one. I would welcome the chance to discuss how I can contribute to ScoutRex's go-to-market strategy. I have attached my CV for your review.

Sincerely,

Md Shahanur Islam Shagor
