I am writing to apply for the Entwicklungsingenieur position in Hochfrequenztechnik at K-tronik GmbH. Your work on mmWave measurement technology and weather remote sensing for ground-based and space missions aligns with my interest in building systems that bridge hardware and software in demanding environments.

My engineering background combines software development with hands-on system integration work. I have experience programming in C++, Python, and Go, and I am comfortable working with Linux-based systems, Docker containers, and automated testing pipelines. These skills are directly applicable to the programming and verification tasks described in the role.

Through a research and development project, I built a Wireless Vision-Aid system that combined YOLOv8n object detection with a custom UDP streaming protocol on a Raspberry Pi and ESP32-CAM. The system required real-time performance optimization, local inference without cloud dependency, and multilingual audio feedback. This experience involved testing, validation, and documentation of system performance against specifications.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how my background can contribute to your team at K-tronik GmbH.

Sincerely,

Md Shahanur Islam Shagor
