I am writing to apply for the Testing role at Macquarie Group. With a background in full-stack development and a focus on building reliable, scalable systems, I am interested in contributing to a global financial services organization that values innovation and long-term impact.

My professional experience spans full-stack web development using Laravel, Next.js, React, and Node.js. I have built and integrated RESTful APIs, implemented secure authentication and role-based access control, and worked with both MySQL and PostgreSQL databases. These skills align well with the technical foundation required for this role.

In previous work, I delivered real-time features, optimized database queries for performance, and deployed applications on Linux servers using Docker, Nginx, and CI/CD pipelines. I also integrated third-party services including payment gateways and cloud storage, ensuring smooth end-to-end delivery.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and welcome the opportunity to discuss how my background can contribute to Macquarie Group.

Sincerely,

Md Shahanur Islam Shagor
