I am writing to apply for the Graduate Business Operations Associate role at Bezos.AI. Your Fulfilment-as-a-Service platform sits at the intersection of logistics, e-commerce, and AI automation, which is exactly the kind of environment where I want to start my career.

I am currently pursuing a Bachelor's degree in Software Engineering at Voronezh State University of Forestry and Technology, Russia. My academic background is quantitative and engineering-focused, and I have built multiple AI-powered applications through hands-on project work. I use AI tools daily in my development workflow and have practical experience building assistants and automations using OpenAI APIs and other AI services.

Through my project work, I have developed AI assistants trained on custom datasets, integrated image processing APIs, and built systems that automate repetitive tasks. I am comfortable working with data, identifying patterns, and building small automations that save time. I learn new tools quickly and can get productive without a long ramp.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I am drawn to the ownership and pace of a startup like Bezos.AI. I deliver what is asked, on time, and I am not afraid to ask questions when stuck. I look forward to the recruitment exercise and the opportunity to build my first Claude skill with your team. I have attached my CV for your review.

Sincerely,

Md Shahanur Islam Shagor
