I am writing to apply for the 2035 position at 4BUILD Group. While the job posting appears to focus on delivery logistics, my background in full-stack development and system architecture can contribute to building reliable digital infrastructure for your operations.

Through my professional experience as a Web Developer, I have designed and developed scalable web applications using Laravel on the backend and Next.js on the frontend. I have built RESTful APIs, implemented authentication and role-based access control, and integrated secure payment gateways. These skills are directly applicable to creating robust systems that manage orders, deliveries, and real-time tracking.

One project that demonstrates my ability to build production-ready systems is the Multivendor E-commerce Management Ecosystem. I developed a Laravel-based backend with MySQL, role-based access control, and real-time notifications via Firebase. The system coordinated multiple user roles including customers, sellers, and delivery agents, which aligns with the operational complexity of managing delivery workflows.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and welcome the opportunity to discuss how I can contribute to 4BUILD Group.

Sincerely,

Md Shahanur Islam Shagor
Full-Stack Developer & AI Engineer
