I am writing to apply for the Customer Support Helpdesk Specialist position at Empathy Talent. With a background in full-stack software engineering and direct experience troubleshooting technical issues across web applications, I am well prepared to serve as a reliable first point of contact for your customers.

Through my work as a web developer, I have spent years diagnosing software problems, debugging APIs, and resolving user-facing issues in production environments. This has given me a practical, solution-oriented approach to technical support. I am comfortable working with CRM platforms, documenting cases accurately, and explaining technical concepts in clear, simple terms.

One area where I feel I can contribute immediately is in troubleshooting software and guiding customers through solutions. In my previous development roles, I regularly communicated with clients to understand their issues, reproduce bugs, and deliver fixes. I understand the importance of timely responses, clear documentation, and keeping customers informed throughout the resolution process.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how my background aligns with this role. Thank you for your time and consideration.

Sincerely,

Md Shahanur Islam Shagor
