I am writing to apply for the KI-Spezialist / AI Power User position at Nature Heart GmbH & Co KG. The role combines AI tool administration, agent-based development, and workflow automation, which aligns closely with my hands-on experience building AI-powered systems and integrating intelligent tools into production environments.

Through my project work, I have developed and integrated AI assistants using OpenAI's latest models and APIs. I built an AI-powered financial application where I trained custom assistants, implemented voice-to-text processing via AWS Transcribe, and automated document generation workflows. This required practical experience with prompt engineering, API integration, and designing AI-driven workflows for real business needs.

I have also worked with agent-based AI systems and automated pipelines. In an AI-powered real estate platform, I integrated Replicate API for image processing and trained multiple AI assistants using GPT models. These projects involved designing automated workflows, managing API interactions, and evaluating model outputs to improve accuracy and relevance.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review. I would welcome the opportunity to discuss how my experience with AI tools, workflow automation, and agent-based development can contribute to your team at Nature Heart.

Sincerely,

Md Shahanur Islam Shagor
