I am writing to apply for the IT Business Analyst (m/w/d) position at MY Humancapital GmbH. The role's focus on shaping digital applications, analyzing requirements, and driving process improvements aligns directly with the way I have worked across technical and business functions in recent years.

Through my professional experience as a Web Developer, I have regularly acted as a bridge between business stakeholders and engineering teams. I analyzed functional requirements, identified optimization opportunities, and helped implement sustainable solutions that improved both system performance and user experience. My work involved evaluating change needs, preparing decision-making materials, and supporting the continuous improvement of customer-oriented applications.

One area that particularly interests me is the combination of analytical thinking and technical execution. I bring solid SQL knowledge from working extensively with MySQL and PostgreSQL in production environments, designing efficient queries and optimizing database performance. This technical foundation allows me to assess data requirements accurately and support informed business decisions.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how my background can contribute to your team. Thank you for your time and consideration.

Sincerely,

Md Shahanur Islam Shagor
