I am writing to apply for the Engineering Manager - Website position at SumUp. SumUp's mission to empower small businesses globally with simple financial tools is something I find genuinely meaningful, and the opportunity to lead the Website squad that shapes the merchant journey from first impression to purchase is particularly compelling.

My professional experience centers on building and delivering modern web platforms. Over the past four years, I have worked extensively with React, Next.js, TypeScript, and Go, alongside microservices architecture and API design. I have built scalable applications from the ground up, focusing on performance, clean architecture, and maintainable code. This technical depth directly matches the core stack and responsibilities of this role.

One area that particularly interests me is leading the ongoing CMS migration to improve marketing agility and content delivery efficiency. In my previous work, I have managed full-stack projects that required careful planning, cross-team coordination, and technical decision-making to ensure smooth transitions. I am comfortable working with Product, Marketing, and Design teams to align technical priorities with business goals.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how my background can contribute to SumUp's Acquisition Mission.

Thank you for your consideration.

Sincerely,

Md Shahanur Islam Shagor
