I am writing to apply for the Site Reliability Engineer (m/f/d) position at gridscale GmbH. The opportunity to help build and operate OVHcloud's on-premise cloud platform, with a strong emphasis on automation, Kubernetes, and AI-assisted engineering, aligns directly with my technical background and interests.

My experience spans Linux system administration, container orchestration with Docker and Kubernetes, and infrastructure monitoring using Prometheus and Grafana. I have worked with CI/CD pipelines and understand the operational discipline required to maintain reliable, production-grade systems. I also have practical experience with Go, which I have used for backend services and automation tasks.

One area that particularly interests me is the AI-substrate workstream described in the role. I have built real-time monitoring dashboards using Node.js and Socket.IO, and I regularly use AI-assisted coding tools in my daily workflow. I see AI tooling as a practical multiplier for engineering output, not just a trend, and I am keen to contribute to agentic prototypes for incident triage and capacity planning.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how my background can contribute to the gridscale and OVHcloud platform team.

Sincerely,

Md Shahanur Islam Shagor
Full-Stack Developer & AI Engineer
