I am writing to apply for the Fullstack Developer Laravel & React/Vue position at MintCode Solutions GmbH. What stands out to me about your approach is the focus on building software that solves real problems without legacy baggage, combined with modern tooling and a culture that values clean code and fast iteration. That aligns directly with how I prefer to work.

Over the past few years, I have been developing full-stack applications professionally using Laravel on the backend and React or Next.js on the frontend. I am comfortable with PHP and Laravel for building robust backend systems, and I work well with React for creating responsive, user-friendly interfaces. I also have experience with relational databases like MySQL and PostgreSQL, and I regularly work with RESTful APIs for integrating third-party systems and connecting frontend and backend services.

In my previous role as a Web Developer at Explo-IT, I was responsible for designing and building scalable web applications from the ground up. I implemented authentication systems, role-based access control, and secure payment gateways in Laravel. I also optimized database performance through Eloquent query tuning and caching strategies. On the frontend side, I built responsive UIs with Next.js and Tailwind CSS, and I delivered real-time features such as chat and live notifications using WebSockets. I deployed and maintained applications on Linux servers using Docker and Nginx, and I worked with CI/CD pipelines for smooth releases.

One project that reflects my full-stack capabilities is the Multivendor E-commerce Management Ecosystem, where I built a Laravel-based backend with role-based access control, RESTful APIs, and MySQL, paired with Flutter mobile apps for different user roles. This project required coordinating multiple stakeholders, integrating payment flows, and ensuring the system scaled reliably. I also have experience with AI integration and automation, having built AI-powered assistants using OpenAI and Replicate APIs in a real estate platform project.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how I can contribute to your team at MintCode Solutions GmbH.

Sincerely,

Md Shahanur Islam Shagor
Full-Stack Developer & AI Engineer
