I am writing to apply for the Vice President Operations role at Aventum Search, where a private markets alternative investment company is seeking a leader for technical operations, technology systems, and cross-functional delivery.

Through my professional experience, I have built and managed technology systems that support business operations across multiple functions. My work includes designing scalable web applications, integrating AI-powered tools, and optimizing operational workflows. I am process-oriented and comfortable working with technology, compliance-related systems, and cross-team coordination.

One area that particularly interests me is structuring and optimizing operational infrastructure. In previous roles, I have deployed full-stack platforms using Laravel, Next.js, and Node.js, implemented role-based access control, and built real-time features using WebSockets. I have also worked with Docker, Linux servers, and cloud deployment to ensure reliable system performance.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how my background in technology systems and operations can contribute to this role.

Sincerely,

Md Shahanur Islam Shagor
