I am writing to express my interest in the HR Lead position at Wowza. While my professional background is in software engineering, I have spent years working closely with leadership, operations, and cross-functional teams to build systems that support people, process, and growth at scale.

What stands out to me about Wowza is the emphasis on building a consistent employee experience and strong compliance foundations for a remote, global team. In my previous roles, I have been responsible for designing role-based access systems, implementing authentication and authorization workflows, and creating structured processes that ensure security, accountability, and smooth operations across distributed teams.

A relevant example is my work on a multi-vendor e-commerce ecosystem where I built a full-stack platform with role-based access control for customers, sellers, delivery agents, and logistics teams. This required designing scalable systems that supported clear permissions, data integrity, and operational consistency across different user groups. The same principles apply to building HR systems that are fair, transparent, and scalable.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review. Thank you for considering my application.
