I am writing to apply for the LEAD position at ABM Industries. With a background in full-stack engineering and a focus on building scalable, secure systems, I am interested in contributing to ABM's mission of delivering integrated facility and infrastructure solutions through technology.

ABM's scale and commitment to innovation across commercial real estate, aviation, and mission-critical sectors stand out. The opportunity to work on systems that enhance operational efficiency and occupant experience aligns with my experience in developing robust, production-ready applications.

In my professional experience as a Web Developer, I have designed and developed full-stack applications using Laravel and Next.js, built RESTful APIs for seamless data exchange, and implemented authentication and role-based access control. I have also optimized database performance through query tuning and caching strategies, ensuring applications remain responsive under load.

One relevant project I delivered is a multi-vendor e-commerce ecosystem powered by a Laravel backend and MySQL database, with role-based access control for customers, sellers, and logistics teams. This project involved building secure APIs, integrating Firebase notifications, and deploying on cloud infrastructure.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and welcome the opportunity to discuss how my skills can contribute to ABM's technology initiatives.

Sincerely,

Md Shahanur Islam Shagor
