I am writing to apply for the Senior IT-Systemadministrator position at strategie:p personalberatung. The opportunity to contribute to the digital security infrastructure of a leading interdisciplinary group with over 200 employees is genuinely compelling.

My technical foundation is built on Linux server administration, containerization with Docker, and web server configuration using Nginx and Apache. I have practical experience managing server environments, setting up CI/CD pipelines, and deploying applications in production. I also work with monitoring tools like Prometheus and Grafana to track system health and performance.

In previous professional roles, I was responsible for deploying and maintaining applications on Linux servers, configuring Nginx and Apache for optimal performance, and managing Docker containers. I implemented CI/CD workflows to streamline deployments and ensure system reliability. This hands-on experience with server infrastructure, combined with my work on system monitoring and documentation, directly aligns with the responsibilities of administering and evolving IT infrastructure.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how my background in system administration and infrastructure management can support your team.

Thank you for your time and consideration.

Sincerely,

Md Shahanur Islam Shagor
