I am writing to apply for the IT-Administrator position at strategie:p personalberatung. Your client's focus on data protection, information security, and cybersecurity aligns with my technical background in system administration and secure infrastructure management.

Through my professional experience, I have worked extensively with Linux server administration, including configuration and maintenance of Nginx, Apache, and Docker-based environments. I have managed virtualized systems, set up CI/CD pipelines, and implemented monitoring solutions using tools like Prometheus and Grafana. These responsibilities have given me a solid foundation in system configuration, network management, and IT security practices.

In previous work, I have administered server environments, configured firewalls and VPN connections, and ensured the reliability of backup systems. I have also created and maintained IT documentation for system configurations and operational procedures. My experience with 1st and 2nd level support includes troubleshooting network issues, managing user access, and resolving tickets efficiently.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how my skills can contribute to your team.

Best regards, Md Shahanur Islam Shagor

Sincerely,

Md Shahanur Islam Shagor
