I am writing to apply for the IT Systemadministrator Infrastruktur position at Intercon Solutions GmbH. The opportunity to take ownership of a modern IT infrastructure and actively develop it further aligns well with my technical background and working style.

My experience centers on Linux-based server administration, containerization with Docker, and web server configuration using Nginx and Apache. I have deployed and maintained production systems, set up CI/CD pipelines for automated deployments, and implemented monitoring solutions to ensure system stability and performance. I approach infrastructure work with a focus on reliability, security, and clear documentation.

In previous roles, I managed full application lifecycles from development through deployment on Linux servers. This included configuring web servers, setting up Docker containers, managing databases, and troubleshooting production issues across multiple environments. I am comfortable working independently on infrastructure projects and collaborating within international teams.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how my infrastructure experience can contribute to your team.

Sincerely,

Md Shahanur Islam Shagor
