I am writing to apply for the Senior IT Strategy Consultant â Monitoring & Observability position at Wavestone Germany AG. The opportunity to help a major industrial company assess its current monitoring practices and define a forward-looking target architecture aligns well with my technical background and analytical approach.

Through hands-on project development, I have built a real-time server health monitoring dashboard that tracks availability, latency, and system metrics across multiple target URLs. The system uses Node.js and Express for the backend, streams live data to the browser via Socket.IO, and includes role-based access control. I deployed it with Docker and Nginx in a fully containerized production setup. This experience gives me practical familiarity with the kind of monitoring and observability tools that are central to this engagement.

In addition to Grafana and Prometheus, I have worked extensively with Linux server administration, Docker, Nginx, and CI/CD pipelines. My broad IT overview spans full-stack development, cloud infrastructure on AWS and Google Cloud, and database management with MySQL and PostgreSQL. This breadth allows me to evaluate solutions from multiple providers without bias toward any specific technology stack.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how my experience can contribute to this project.

Best regards, Md Shahanur Islam Shagor

Sincerely,

Md Shahanur Islam Shagor
