I am writing to apply for the Senior Software Test Engineer position at Connected Consumables. Your mission to transform cancer treatment through innovative medical technologies, particularly with products like Onctopus and OnctoDose, is both meaningful and technically compelling. The opportunity to contribute to the reliability and safety of infusion therapy systems aligns directly with my background in building robust, high-quality software.

My professional experience spans over four years of backend software development, where I have designed and maintained scalable systems using Laravel, Node.js, and Express.js. I have built RESTful APIs, implemented role-based access control, and worked extensively with relational databases like MySQL and PostgreSQL. This foundation gives me a strong understanding of backend architecture and the importance of testability from the ground up.

A key part of my workflow has been integrating automated testing into CI/CD pipelines using tools like Jest, PHPUnit, and PyTest. I have developed and maintained automated tests for both APIs and backend logic, and I regularly participate in code reviews with a focus on quality, test coverage, and best practices. I am comfortable designing test strategies for functional and non-functional requirements and tracking defects through to resolution.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how my experience in backend development and test automation can contribute to the quality and safety of your medical technology products.

Thank you for your time and consideration.

Sincerely,

Md Shahanur Islam Shagor
