I am writing to apply for the Haustechniker (m/w/d) position with MY Humancapital GmbH in Munich. While my professional background is in software engineering, I have developed strong technical monitoring and system maintenance skills that are directly relevant to this role.

In my work, I have built real-time server health monitoring systems that track availability, latency, and performance across multiple targets simultaneously. These systems use Node.js, Socket.IO, and Docker to stream live metrics and ensure uninterrupted operation. This experience with monitoring, maintaining uptime, and coordinating technical components maps well to the responsibilities of a Haustechniker.

One area that particularly interests me is the use of modern building control technology to monitor and manage electrical, heating, climate, and ventilation systems. My hands-on experience with real-time monitoring dashboards and system reliability has given me a practical understanding of how to maintain complex technical installations and respond quickly to irregularities.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how my technical monitoring and maintenance experience can contribute to your team in Munich.

Thank you for your consideration.

Sincerely,

Md Shahanur Islam Shagor
