I am writing to apply for the Working Student IT Consulting - weclapp ERP position at BOLD & EPIC GmbH. Your focus on integrating AI deeply into consulting, development, and data analysis workflows is particularly interesting to me, as it reflects my own approach to building practical, intelligent systems.

My background combines software engineering with a strong affinity for systems, data, and AI-driven processes. Through hands-on project development, I have built full-stack applications that integrate AI assistants for data analysis and automation. I am accustomed to analyzing data structures and requirements, then translating them into clean, practical configurations and features.

One area that particularly interests me is the role of supporting consultants with plugin and interface projects. In previous work, I have developed APIs and integrated third-party services, which required a clear understanding of how different systems connect and exchange data. I am comfortable working independently to analyze customer processes and document configurations in a way that is understandable for both colleagues and clients.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I am eager to bring my analytical mindset, attention to detail, and hands-on development skills to your team. I have attached my CV for your review and look forward to the possibility of contributing to BOLD & EPIC Systems.

Sincerely,

Md Shahanur Islam Shagor
Full-Stack Developer & AI Engineer
