I am writing to apply for the Senior Manager fˆ…r digitale Abrechnungsprozesse und Controlling position at farmconnect. Your work in renewable energy, particularly in data-driven operations and intelligent monitoring for wind energy operators, is an area where I see strong alignment with my technical background.

As a Full-Stack and AI Engineer, I have spent over four years building scalable web applications and automation systems. My experience includes designing and optimizing databases, integrating RESTful APIs, and developing real-time monitoring dashboards. These skills directly support the kind of digital process optimization and software solution implementation your role requires.

One area that particularly interests me is the challenge of building and maintaining KPI structures and management reporting systems. In previous work, I developed a real-time server health monitoring dashboard that tracked system metrics, availability, and latency across multiple endpoints. This project involved live data streaming, role-based access control, and structured reporting, which mirrors the controlling and reporting responsibilities described in your job description.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how my background in process automation and software engineering can contribute to farmconnect’s continued growth in the renewable energy sector.

Sincerely,

Md Shahanur Islam Shagor
Full-Stack Developer & AI Engineer
