I am writing to apply for the Maintenance & MEP Technician position at Scales and Associates, supporting a luxury hospitality operation in The Bahamas. While my professional career has been in software engineering, I have consistently worked with hardware systems, embedded devices, and real-time sensor networks, which has given me a practical, hands-on approach to troubleshooting and maintenance.

Through my work on autonomous systems and UAV projects, I have developed strong diagnostic skills and experience maintaining complex technical equipment. I have worked with Raspberry Pi, ESP32, NVIDIA Jetson Nano, and various sensors, requiring regular inspection, calibration, and repair of hardware components. This experience translates well to maintaining pumps, valves, HVAC equipment, and electrical systems in a hospitality environment.

I am physically fit, comfortable working in island environments, and willing to handle vessel transfers, lifting, and working at height as required. I am also flexible regarding weekends, public holidays, and special events. I maintain accurate records and follow safety protocols diligently, which aligns with the compliance and documentation requirements of this role.

In addition to my technical background, I communicate clearly across teams and am fluent in Bengali and English, with working knowledge of Russian and Hindi. I adapt quickly to new environments and enjoy collaborating in international settings.

I have attached my CV for your review and look forward to the possibility of contributing to your team in The Bahamas.

Sincerely,

Md Shahanur Islam Shagor
