I am writing to apply for the Block Operator position at SAL TRADING LIMITED. While my career has been in software engineering, I bring a strong technical discipline, hands-on hardware experience, and a methodical approach to equipment operation and safety that translates well into a manufacturing environment.

Through my work with embedded systems and hardware integration projects, I have developed practical skills in monitoring equipment performance, running routine checks, and maintaining safe operational conditions. I have worked with Raspberry Pi, ESP32, and NVIDIA Jetson Nano boards, which required careful handling, systematic testing, and attention to detail in physical setups. These experiences have given me a solid foundation for operating and monitoring industrial equipment.

I am comfortable with physical work, learning new machinery, and following safety procedures without shortcuts. I am ready to start with the cuber operation, material handling, and yard organization tasks, and I am genuinely interested in developing the skills to eventually operate the full block plant production system.

In addition to my technical background, I work effectively in team environments and communicate clearly with colleagues. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and adapt quickly to new workflows and responsibilities.

I have attached my CV for your review and would welcome the opportunity to discuss how my discipline and willingness to learn can contribute to your manufacturing team.

Sincerely,

Md Shahanur Islam Shagor
