I am writing to apply for the Communications Manager role at Lemon.io. Your mission to build the autopilot for hiring is timely, and the opportunity to shape how a bootstrapped, profitable company tells its story is exactly the kind of challenge I am looking for.

While my background is in software engineering, I have spent years writing about technology. I have documented complex systems, written project narratives for open-source work, and communicated technical decisions to both engineering and non-engineering audiences. Writing is not a side activity for me â it is how I clarify my thinking and share what I build.

Lemon.io needs someone who can sit in product and customer syncs, identify stories, and turn internal milestones into external content. I have experience working across engineering, product, and operations teams. I know how to extract what matters from technical discussions and shape it into clear, useful communication. I also use AI tools daily â from content generation to workflow automation â and I am comfortable building systems that scale distribution without sacrificing quality.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review. I would welcome the chance to share writing samples and discuss how I can help make Lemon impossible to ignore in the engineering-hiring conversation.

Sincerely,

Md Shahanur Islam Shagor
