I am writing to apply for the Drohnen-Pilotin / UAV Operator position at Skyflow Network GmbH. What your team is building â using automated drone flights to deliver real-time situational awareness to emergency responders â is exactly the kind of mission-driven technology I want to be part of.

Through my research and development work on secure UAV systems, I have gained practical experience with autonomous navigation, sensor integration, and real-time decision-making. I have worked with platforms such as Raspberry Pi, ESP32-CAM, and NVIDIA Jetson Nano, and I have designed systems that operate reliably under constrained conditions. My focus has been on building resilient drone architectures that maintain functionality even in adversarial or GPS-denied environments.

One area that particularly interests me is the operational responsibility this role carries. In my work, I have developed protocols for secure drone-to-drone communication using encryption and authentication mechanisms, and I have implemented real-time monitoring systems that track system health and detect anomalies early. These experiences have prepared me to handle pre-flight checks, monitor multiple systems simultaneously, and make clear decisions under time pressure.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I am ready to take on the responsibility of operating UAV systems in real emergency scenarios and to contribute my technical perspective to help improve both software and hardware. I have attached my CV for your review and would welcome the opportunity to discuss how I can contribute to your team.

Sincerely,

Md Shahanur Islam Shagor
