I am writing to express my interest in the Senior Kalkulator / Lead Kalkulation position at SpotOn Solutions. The opportunity to build a new calculation department from the ground up, rather than managing an inherited system, is exactly the kind of challenge I find compelling.

My professional background is in software engineering, where I have spent over four years designing and building scalable web applications and backend systems. I have experience creating complete architectures from scratch, including database design, API development, and deployment pipelines. This has given me a practical understanding of how to build efficient, maintainable systems from the ground up.

What stands out to me about this role is the emphasis on shaping processes, tools, and structures rather than simply maintaining existing ones. In my previous work as a Web Developer, I regularly built new features, optimized performance, and integrated third-party services. I am comfortable working closely with cross-functional teams and making decisions that affect the entire workflow.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how my experience in building systems from scratch could contribute to your team.

Sincerely,

Md Shahanur Islam Shagor
